

Easton Senior Center Renovations Easton, CT

Project Description:

AI Engineers, Inc. was the General Contractor for this complete interior renovation and conversion of the former Staples Elementary School into a new Senior Center. Work consisted of completely gutting out the space including half the roofing system. We installed a completely new Chilled water AC system along with upgrading the existing plumbing, electrical, steam heating, fire sprinkler system, 8" fire service water main and HVAC systems. This work was done in conjunction with the complete interior fit-out of the new 12,850SF Easton Senior Center portion of the existing complex. All this work was done while keeping the existing lower level senior center in full operation.
